Learning management system

At the first, our project is composed into four modules:

1. User module

2. Course module

3. Assignment module

4. Exam module

In the user module you can :

     Add , update and delete users

     Also, you can add, update and delete user privilege

     Finally , block users from access content

In the course module you can :

     Add , update and delete course

     Also , add update and delete lecture

     Finally , generate reports about how students doing in each course

In the Assignment module you can :

     Add , update and delete assignment

     Also ,include assignment due date , assignment type

In the Exam module you can :

     Add , update and delete exams and its questions ,

     Assign students to exams based on registered courses

     Also , correct exams and generate results

     Finally , generate exam statistics

At the end , We applied on this project the five Solid Principles and we made our effort to make it clean code .
